

# Dicer

Programmer's Guide and Reference  
Licensed Program 2A55DCR V1R9M0

Spooled File Conversion

---

## **Edition**

### **Ninth Edition (January 2014)**

This edition applies to the licensed program Dicer (Program 2A55DCR), Version 1 Release 9 Modification 0, and to all subsequent releases and modifications until otherwise indicated in new editions. This revision makes all previous editions obsolete. Make sure you are using the proper edition for the level of the product.

This manual is available as option 1 from the DICER menu, in PDF format in directory /Gumbo/Proddata/2A55DCR/doc on your system, and on the web at [www.gumbo.com](http://www.gumbo.com)

## Chapter 1 Introduction

---

### What's In This Chapter

This chapter introduces you to Dicer. The chapter:

- Describes the features of Dicer.
- Describes what Dicer does.
- Describes Dicer's relationship to other products.
- Outlines future directions for the product.
- Describes conventions used in this manual.

---

### Dicer Features

Dicer is a software utility that allows you to merge, sort, dice (split), and/or duplicate the content of IBM i spooled files, creating one or more new spooled files as a result. With Dicer you can reorganize an application's output without modifying the application.

As examples, these capabilities allow you to:

- Merge a spooled file contain customer invoices with a spooled file containing the related packing slips, sorting by customer number. The resulting spooled file will contain each customer's invoice and related packing slip as consecutive pages eliminating the manual effort required to collate the original spooled files.
- Duplicate a spooled file to additional output queues for printing.
- Sort the contents of a spooled file to avoid manual collating steps.
- Split the pages of a large spooled file into multiple spooled files containing only the pages specific to a department, user, store or branch.

Dicer supports the following IBM i print data streams:

<b>*SCS</b>	SNA Character String.
<b>*IPDS</b>	Intelligent Printer Data Stream.
<b>*AFPDS</b>	Advanced Function Presentation Data Stream.

Our Display Page Data (DSPPAGDTA) command is included in the product. The command allows you to display selected data from within a spooled file. The command supports output to a display, to print, and most interestingly to an output file. For example, by displaying the page positions of the customer number in spooled files containing invoices, you can create an index from customer number to the related spooled files that contain their invoices.

Our Retrieve Page Data (RTVPAGDTA) command is included in the product. The command allows you to retrieve data from a specific position spooled file. The requested data is returned in a Control Language (CL) program variable.

For example, by retrieving the page position of the customer number in a spooled file containing an invoice, you can determine the customer number for which the invoice was generated from within a CL program.

Dicer includes a work-a-like for IBM i's Work with Spooled File (WRKSPLF) command called Work with Gumbo Spooled Files (WRKGSISPLF). It also includes a work-a-like for IBM i's Work with Output Queue (WRKOUTQ) command called Work with Gumbo Output Queue (WRKGSIOUQ). These commands

provide the same functions as their IBM i equivalent. In addition they provide an option that allows you to access the function of Dicer by entering an option number.

---

## What Dicer Does

The main function of Dicer is accessed by running the Merge Spooled File (MRGSPLF) command. The command takes one or more existing IBM i spooled files as input and merges, sorts, dices (splits) and/or duplicates the spooled files' content based on the criteria you specify.

The command creates one or more new spooled files which are placed in the requested output queue.

The merge process is described in detail in Chapter 5 Merge Processing.

---

## Product Positioning

Gumbo Software, Inc. has several IBM i based products:

Number	Licensed Program
<b>2A55SAM</b>	Spool-a-Matic - Convert IBM i spooled files to PDF, RTF, HTML, etc. in the Integrated File System
<b>2A55SM1</b>	SpoolMail - Email IBM i spooled files as PDF, RTF, HTML, etc.
<b>2A55XL1</b>	Excel-erator - Convert IBM i database files into spreadsheets in the Integrated File System or as email
<b>2A55SM2</b>	Gumbo Mail - Send email from your applications
<b>2A55DCR</b>	Dicer - Merge/sort/split/duplicate spooled files
<b>2A55RDA</b>	Report Designer - Edit DDS, RPG and ILE/RPG print specifications
<b>2A55RM1</b>	Report Manager - Automate report distribution, bursting and spooled file management

There is some overlap between and unique function within the products. Choose the product or combination of products that provide the function you need:

Function	Product						
	SAM	SML	XL1	SM2	DCR	RDA	RML
Primary input to product	SPL	SPL	DBF	IFS	SPL	SRC	SPL
Primary output from product	IFS	EML	I/E	EML	SPL	SRC	SPL
Monitor output queues for work	YES	YES	-	-	-	-	YES
Spooled file distribution	-	-	-	-	-	-	YES
Burst (split) spooled files	YES	YES	-	-	YES	-	YES
Merge/sort/duplicate spooled files	-	-	-	-	YES	-	YES
Convert spool to TXT stream file	YES	YES	-	-	-	-	YES
Convert spool to PDF/RTF/etc stream file	YES	YES	-	-	-	-	-
Convert DB file to spreadsheet	-	-	YES	-	-	-	-
Email stream file as attachment	-	YES	YES	YES	-	-	YES
Write stream to Integrated File System	YES	-	YES	-	-	-	YES
Set up IBM i SMTP and mailhub	-	YES	YES	YES	-	-	YES
Edit DDS, RPG, ILE/RPG source code	-	-	-	-	-	YES	-

Where: DBF = Database file  
EML = Email  
IFS = Stream file in the Integrated File System  
I/E = Both IFS and EML  
SPL = Spooled file  
SRC = Source code

---

## Future Directions

Future releases of Dicer will include enhanced functionality based on customer feedback. Additionally, enhancements may be added to an existing release by Program Temporary Fix (PTF).

Candidate enhancements include:

- Additional control over the attributes of the generated spooled files.

Contact **GUMBO** to suggest additional enhancements.

---

## Manual Conventions

A note on conventions used in this manual. In several places, instructions for entering commands are given. When the command is intended to be run from a PC command prompt, it is flagged by `[PC]`. When the command is intended to be run from an IBM i command line, it is flagged by `[i]`, or is not flagged at all. `[Enter]` denotes the enter key.

---

## Chapter 2 Installation

---

### What's In This Chapter

This chapter describes

- How to install Dicer.
- How to verify the installation.
- API authority granted during installation
- How to include the DICER library in a job's library list.
- How to determine release dependencies.
- How to test a new release while leaving the old in production.
- How to remove Dicer from the system.
- How to find additional installation information.
- How to contact technical support.
- Hot site installation.
- Permanent Authorization Codes.

---

### Installing Dicer

Follow these instructions to install Dicer V1R9M0 on IBM i using physical media or a virtual image:

#### Prepare

If you are upgrading a previous release (if Dicer is currently installed), perform these steps before installing the software:

1. Read the Enhancement Summary to determine if any changes affect your installation.
2. Insure that the product is not in use, as the installation process must clear the product's library. This will fail if objects such as menus are in use. If the installation fails, the previous release will be restored.

#### Install

**Note:** If you are installing from a save file downloaded as a self extracting zip (.exe), use the save file specific "readme.htm" instructions included in the download.

1. Sign on to the system as the security officer (QSECOFR).
2. Verify that your machine is at IBM i V7R1M0 or later by running:

```
DSPDTAARA DTAARA(QGPL/QSS1MRI)
```

**Note:** If you are running a version of IBM i earlier than V7R1M0 you cannot install Dicer V1R9M0 on your machine. You must install an earlier version of Dicer or upgrade the operating system.

3. Verify that user domain objects are allowed in the libraries DICER and QSRV, by running:

```
WRKSYSVAL SYSVAL(QALWUSRDMN)
```

Take option 5 to display the value. If the value is not \*ALL, use option 2 to add libraries DICER and QSRV to the list of libraries where user domain objects are allowed.

**Note:** QSRV is required to correctly process PTFs when they are loaded and applied.

4. Insure that IBM i will be able to verify the signatures that we apply to our product's objects by installing our Signing Certificate and Root CA Certificate using Digital Certificate Manager. Alternately, insure that signature verification will not prevent the restore operation by running:

```
WRKSYSVAL SYSVAL(QVFYOBJRST)
```

Take option 5 to display the value. If the value is 3 or higher, use option 2 to temporarily change the value to 1.

5. Mount the physical media or virtual image on the appropriate device.
6. Submit the Restore Licensed Program (RSTLICPGM) command to batch:

```
RSTLICPGM LICPGM(2A55DCR) DEV(device-name) LNG(2924)
```

**Note:** Where "device-name" is the device where the media or image was mounted and is usually OPT01.

**Note:** During the restore operation, the system operator message queue may receive inquiry message CPA3DE4 "Directory not registered. (C G)". Unless you are using a directory naming convention similar to ours (that is the directory specified in the CPA3DE4's second level text is unrelated to our software), you can safely respond with a "G" to reestablish the relationship between the directory and the product. Typically the message will occur three or four times.

## Finish

When the RSTLICPGM command completes, library DICER and directory '/Gumbo/ProdData/2A55DCR' contain the new software. To complete the installation:

1. If you have an Authorization letter with your permanent authorization code, enter it now.

**Note:** Dicer automatically grants 30 days usage for new installs or 90 days usage for release upgrades.

2. Retrieve the current cumulative Dicer PTF package by running the following command:

```
DICER/RTVGSIPTF
```

**Note:** **GUMBO** recommends downloading the current cumulative PTF package after installing the software.

3. Visit our PTF page at [www.gumbo.com](http://www.gumbo.com) and check the **Additional IBM i PTF Information** section for IBM PTFs you may need to install.
4. You can access the Dicer menu by running the following command:

```
GO MENU(DICER/DICER)
```

---

## Verifying Dicer Installation

You can verify that Dicer has been correctly installed by running the Check Product Option (CHKPRDOPT) command:

```
CHKPRDOPT PRDID(2A55DCR) RLS(V1R9M0) CHKSIG(*NONE)
```

**Note:** If you have installed our digital certificates, specify CHKSIG(\*ALL) instead of CHKSIG(\*NONE) and digital signatures will be checked.

If the message 'No errors detected by CHKPRDOPT.' is displayed on the bottom of your display when the command finishes, Dicer is installed correctly.

If the message is not displayed, check your job log messages or see the Recovery Procedures in the *Software Installation Problems* section of the *Trouble-Shooting* chapter of this manual.

---

## API Authority Granted During Installation

The first time Dicer is installed on a system, public authority \*USE is granted to the IBM i supplied spooling APIs. These are QSPOPNP, QSPCRTSP, QSPGETSP, QSPPUTSP and QSPCLOSP. The APIs are used by Dicer to open, create, write, read and close spooled files. This is required to perform the product's functions.

Security restrictions and authority requirements pertaining to spooled files and output queues remain in effect and are enforced by IBM i during use of the APIs. However, if you are operating a highly secured environment you may wish to review and revise the authority granted during installation.

No authority is granted during installation if Dicer exists on the system. This prevents new releases from altering changes made after the initial installation.

---

## Library List Considerations

Library DICER must be in the library list of jobs using Dicer commands, or the commands must be qualified with library DICER. Depending on your installation and intended use, you can choose to:

- Add library DICER to the system library list. This insures every job in the system has access to Dicer commands. However, this introduces problems with installing new releases and is not recommended.
- Add library DICER to the initial library list parameter of job descriptions controlling jobs that will use Dicer commands. (recommended)
- Run an ADDLIB DICER command in individual threads requiring Dicer commands.
- Qualify the command names on each use:

```
DICER/CHGDCRDF'T
```

Library DICER will be temporarily added to the product portion of the current thread's library list.

Determine the best method for your installation and perform any changes required.

---

## Release Considerations

Dicer operates under IBM i V7R1M0 or higher. Releases occur on a different schedule than IBM releases. Once Dicer is installed, the following considerations apply:

- A new release of IBM i may be installed without installing a new release of Dicer.

Dicer uses only published or IBM sanctioned interfaces and is upward compatible with all releases of IBM i. The Dicer authorization code does not change.

- A new release of Dicer may be installed without installing a new release of IBM i.

Any change in the requirements for operating system release level will be noted in the documentation accompanying the Dicer release. The new authorization code must be entered.

- A new release of Dicer may be installed over any prior release of Dicer.

You can skip "missed" releases.

- More than one release of Dicer may be installed on a system at one time.

By restoring Dicer to a library other than DICER, a new release can be installed for testing while the old release remains in production. Any release-to-release considerations that may apply will be noted in the documentation accompanying the new release. Additional operational considerations may apply. For more information on renaming a library during licensed program installation, see the Restore Licensed Program (RSTLICPGM) command and the New Release Testing section of this chapter.

- When a new release of Dicer is installed in the same library as an old release the following processing is performed in order to preserve data and Dicer authorization information:
  1. The Dicer library is saved to QGPL/DCRVxRyMz. Where VxRyMz is the old release.
  2. Product objects that contain default settings and operational information are copied to library QTEMP.
  3. The Dicer library is cleared.
  4. Dicer is restored.
  5. Default settings and operational information are copied back to the product objects.
  6. All objects duplicated to QTEMP are deleted.
  7. Save file QGPL/DCRVxRyMz is deleted.

**Note:** **GUMBO** recommends making a backup of the old release before installing a new release of Dicer.

---

## New Release Testing

Unlike IBM licensed programs, **GUMBO** licensed programs are packaged in a way that allows multiple release to be installed at the same time. This feature allows you to test a new release while the old release remains in production.

The key to new release testing are the LIB() and CODHOMEDIR() parameters of IBM i's Restore License Program (RSTLICPGM) command which allow you to restore the product to a library name and directory different from those used during packaging.

To test a new release, follow this procedure:

1. Review the Enhancement Summary for any release-to-release considerations that could affect your installation.
2. Install the new release in library DCRV1R9M0 and directory '/Gumbo/ProdData/2A55DCRV1R9M0':

```
RSTLICPGM LICPGM(2A55DCR) DEV(device-name) LNG(2924)
          LIB(DCRV1R9M0) REPLACERLS(*NO)
          CODHOMEDIR(' /Gumbo/ProdData/2A55DCRV1R9M0 ')
```

Where "device-name" is the device where the media or image was mounted.

3. Perform your new release testing.
4. When testing is complete, you must delete the new release.

```
DLTLICPGM LICPGM(2A55DCR) RLS(V1R9M0) OPTION(*ALL)
```

**Note:** Do not delete nor rename libraries and directories to move the new release into production. Doing so will corrupt the license program information kept internally by IBM i. If this has already occurred, see the Software Installation Problems section of the *Trouble-Shooting* chapter of this manual.

5. Follow the installation instructions to place the new release into production.

---

## Deleting Dicer

Follow these instructions to remove Dicer from IBM i:

1. Sign on to the system as the security officer (QSECOFR).
2. Delete the Dicer library by using the Delete Licensed Program (DLTLICPGM) command:

```
DLTLICPGM LICPGM(2A55DCR) OPTION(*ALL)
```

These instructions delete an otherwise healthy installation of Dicer. If the installation has been damaged, follow the instructions for Installation Fails in the *Software Installation Problems* section of the *Trouble-Shooting* chapter of this manual.

---

## Additional Installation Information

Additional detailed installation information and instructions can be found in *IBM i and related software > PDF file... > Installing, upgrading, or deleting IBM i and related software SC41-5120* topic in the IBM i Information Center at <http://publib.boulder.ibm.com/eserver/ibmi.html>.

---

## Technical Support

If you encounter a problem with Dicer you should:

- Review the information in the Trouble Shooting chapter for a description of and solution to common problems.
- Load and apply the current cumulative PTF package for the software. You can obtain the current package by visiting the web site listed below.

If the problem remains unresolved, contact support@gumbo.com.

If your problem involves spooled file processing, the best method for getting it resolved is to capture the spooled file using the Create Spool Save File (CRTSPLSAVF) command and email the resulting save file along with a description of the problem to the address listed above. Be sure to include contact information.

**Note:** See the Trouble Shooting chapter for details on creating and sending spool save files.

---

## Hot Site Installation

In the event of a catastrophic system failure, an otherwise properly licensed and authorized copy of our product may be copied to a back up or fail over machine. The product's authorization algorithm will detect that the software is operating on a machine serial number different from the licensed and authorized serial number and automatically create and install a 30-day temporary authorization code for the back up or fail over machine. You do not need to contact Gumbo Software, Inc. in the event of an emergency.

An otherwise properly licensed and authorized copy of this product may be transferred to a back up or fail over machine for the purpose of testing your emergency recovery procedures and the product's automatic temporary authorization function.

The correct sequence of steps is as follows:

1. Install the software and enter the permanent authorization code on your production machine.
2. Save the software from your production machine using the Save Licensed Program (SAVLICPGM) command. This creates an authorized copy, save it with your back ups.
3. When restoring to the back up or fail over machine you must first insure that any previous copies have been deleted. To delete a previous copy use the Delete Licensed Program (DLTLICPGM) command.
4. Restore the authorized copy to the back up or fail over machine using the Restore License Program (RSTLICPGM) command.
5. Confirm that the authorized copy was correctly restored by running the Check Product Option (CHKPRDOPT) command.
6. The first time the software is used on the back up or fail over machine the product's authorization algorithm will create and install a temporary authorization code running for 30 days. This allows you install the authorized copy in advance of a disaster.

---

## Permanent Authorization Codes

When you purchase a product from us, or when we send you a new release of a product, you receive a permanent authorization code. Here we describe how to determine the information you must give us in order to receive a permanent authorization code and how to determine if the permanent authorization code you have received is correct for your installation.

The overwhelming majority of licenses purchased from us are **System Wide Licenses**. The other possibility, a **Partition Only License**, is described at the end of this section. For a System Wide License, permanent authorization codes are specific to a **Serial Number**, a **Processor Group**, and our product's **Release**. For a Partition Only License, permanent authorization codes are specific to a **Serial Number**, a **Partition ID Number**, the partition's **Maximum Processor Capacity**, and our product's **Release**.

In all cases, our permanent authorization codes are specific to a release of our product. The release of IBM i never makes a difference. To determine the release of our product installed on IBM i, run:

```
DSPPTF LICPGM(2A55DCR)
```

Where the possible LICPGM numbers are:

Number	Licensed Program
2A55SAM	Spool-a-Matic - Convert IBM i spooled files to PDF, RTF, HTML, etc. in the Integrated File System
2A55SM1	SpoolMail - Email IBM i spooled files as PDF, RTF, HTML, etc.
2A55XL1	Excel-erator - Convert IBM i database files into spreadsheets in the Integrated File System or as email
2A55SM2	Gumbo Mail - Send email from your applications
2A55DCR	Dicer - Merge/sort/split/duplicate spooled files
2A55RDA	Report Designer - Edit DDS, RPG and ILE/RPG print specifications
2A55RM1	Report Manager - Automate report distribution, bursting and spooled file management

The 5th line of the panel shows the release you are running. It is V1R9M0 in this example.

```
Display PTF Status
System: GUMBO4
Product ID . . . . . : 2A55DCR
IPL source . . . . . : ##MACH#A
Release . . . . . : V1R9M0

Type options, press Enter.
 5=Display PTF details  6=Print cover letter  8=Display cover letter

PTF                                IPL
Opt ID      Status                  Action

(No PTFs found.)

Bottom
F3=Exit  F11=Display alternate view  F17=Position to  F12=Cancel
```

**Note:** It is possible that more than one release of a product is installed. To check, press `[Enter]`. If you are returned to the command line, only one release is installed.

All of our permanent authorization codes are serial number dependent. For a System Wide License they are also Processor Group dependent. To determine your system's serial number and processor group, run:

```
WRKLICINF
```

Lines 3 and 4 of the resulting panel show the serial number and processor group of your system.

```

Work with License Information
GUMBO4
04/06/10 18:08:32

F17=Position to  F23=More options
(C) COPYRIGHT IBM CORP. 1980, 2007.

```

For a Partition Only License, permanent authorization codes depend on the Partition ID Number and maximum processor capacity. To determine the number and processor capacity of partitions on your system:

1. Start system service tools by running:

```
STRSST
```

2. After entering a Service tools user ID and Service tools password, select the option to Work with system partitions.
3. Select the option to Display partition information.
4. Select the option to Display partition processing configuration.
5. Note the Partition ID Number and Total Processor Maximum.

```

Display Partition Processing Configuration
System: GUMBO4
Number of system processors . . . . . : 2
Number of available system processors . . . . . : 0
Size of system main storage (MB) . . . . . : 4096
Size of available system main storage (MB) . . . . . : 0
Interactive feature available . . . . . : 0 %

Partition
-----Total Processors-----
Identifier Name Current / Pending Minimum / Maximum
0 PRIMARY 1 / 1 1 / 1
1 SECONDARY 1 / 1 1 / 1

F3=Exit F5=Refresh F6=Print F10=Main storage
F11=Display allocated I/O resources F12=Cancel

```

**Note:** A Partition only license is not valid for a machine with only one partition.

**Note:** Our product's algorithm checks the authorization against the Total Processors Current value. If the maximum configured is larger than the license, the algorithm will grant usage as long as the current configured is with in the license's limit, and will issue a warning.

---

## Chapter 3 Menu

---

### What's In This Chapter

This chapter describes how to access the Dicer menu, and reviews the functions that can be performed from the menu.

---

### Accessing Menu DICER

The Dicer commands and functions that you will use most often are collected on menu DICER. To access the menu use the Go To Menu (GO) command:

```
GO MENU(DICER/DICER)
```

Library DICER is added to the product portion of the current thread's library list while the menu is displayed.

---

### DICER Menu Options

```
DICER                               Dicer                               System:   DCR

Select one of the following:

    1. Reference Manual

Dicer
    2. Merge/Sort/Dice/Duplicate Spooled File           MRGSPLF
    3. Work with Gumbo Spooled Files                   WRKGSISPLF
    4. Work with Gumbo Output Queue                   WRKGSIOUQ
    5. Dump Page Index Positions                       DMPPIP
    6. Display Page Data                               DSPPAGDTA
    7. Retrieve Page Data                             RTVPAGDTA

    10. Verify the product is installed correctly

Other Options
    61. Display Current PTF Status                     DSPPTF

```

#### Option 1. Reference Manual

Provides access to the Dicer Programmer's Guide and Reference Manual.

#### Option 2. Merge Spooled File

The Merge Spooled File (MRGSPLF) command combines the pages of one or more spooled files to create a new spooled file and optionally sorts the pages.

#### Option 3. Work with Gumbo Spooled Files

The Work with Gumbo Spooled Files (WRKGSISPLF) command works like IBM i's Work with Spooled Files (WRKSPPLF) command but provides additional options to access the functions of Dicer.

#### **Option 4. Work with Gumbo Output Queue**

The Work with Gumbo Output Queue (WRKGSIOUQ) command works like IBM i's Work with Output Queue (WRKOUTQ) command but provides additional options to access the functions of Dicer.

#### **Option 5. Dump Page Index Positions**

The Dump Page Index Positions (DMPPIP) command prints the line and position values, for data found in the spooled file, as calculated by the software. These are used to specify data selection criteria for the spooled file.

#### **Option 6. Display Page Data**

The Display Page Data (DSPPAGDTA) command shows the contents of a spooled file's pages at specified locations. The contents can be shown, printed, or directed to database output file (OUTFILE).

#### **Option 7. Retrieve Page Data**

The Retrieve Page Data (RTVPAGDTA) command retrieves data from a specific location in a spooled file. The requested data is returned in a Control Language (CL) program variable.

#### **Option 10. Verify the product is installed correctly**

Installation verification checks to make sure that Dicer has been correctly installed by running IBM i's Check Product Option (CHKPRDOPT) command.

#### **Option 61. Display Current PTF Status**

Displays the Dicer PTFs that have been applied to the software.

#### **Option 62. Change Dicer Authorization**

The Change Dicer Authorization (CHGDCRAUT) command changes the authorization code for Dicer. The command is used to extend a demonstration period or to permanently authorize Dicer for a system or a partition.

#### **Option 63. Search Help Index**

Search help index allows you to access the Dicer help index and search for specific information.

#### **Option 64. Change Dicer Default**

The Change Dicer Default (CHGDCRDFT) command changes values used by Dicer to control processing and other activities.

#### **Option 65. Create Spool Save File**

The Create Spool Save File (CRTSPLSAVF) command creates a save file containing a spooled file and all its related resources. The save file is suitable for emailing with a problem report.

#### **Option 66. Check Dicer Authorization**

The Check Dicer Authorization (CHKDCRAUT) command executes Dicer's authorization verification function. This allows you to determine whether and how the product is authorized for use.

#### **Option 67. Retrieve Gumbo PTF**

The Retrieve Gumbo PTF (RTVGSIPTF) command checks a remote system for new product PTFs, and, if available, downloads and installs them.

---

## Chapter 4 Implementation

---

### What's In This Chapter

This chapter describes how to implement Dicer in your environment. The chapter:

- Gives an overview of implementation choices.
- Describes changing programs to process spooled files.
- Describes manually processing spooled files.
- Describes included example source code.
- Describes useful spooled file information.
- Describes a CL coding tip.
- Describes changing command defaults.

---

### Overview

The main function of Dicer is accessed by running the Merge Spooled File (MRGSPLF) command. The command takes one or more existing IBM i spooled files as input and merges, sorts, dices (splits) and/or duplicates the spooled files' content based on the criteria you specify. To implement Dicer in your environment you have two basic choices:

1. Modify each program that creates spooled files that will be processed to directly run the Merge Spooled File (MRGSPLF) command.

<b>Pros</b>	The spooled files are always processed as soon as they are created.
<b>Cons</b>	Programs must be modified and recompiled.

2. Manually run the Merge Spooled File (MRGSPLF) command from a command line or using option 15 from the Work with Gumbo Spooled Files (WRKGSISPLF) or Work with Gumbo Output Queue (WRKGSIOUQ) displays.

<b>Pros</b>	Good for casual or on demand use, no program changes required.
<b>Cons</b>	Requires manual operations and scheduling.

See the following sections for a detailed discussion of the choices.

---

### Changing Programs

Dicer can be implemented by changing the programs that create spooled files to process them directly. A typical batch Control Language (CL) program that creates two spooled files, one containing invoices the other containing packing slips would contain the following CL sequence:

```
.  
.  
OVRDBF FILE(CUSTOMER) TOFILE(ACGLIB/CUSTOMER)  
OVRDBF FILE(OPNINVOICE) TOFILE(ACGLIB/OPNINVOICE)  
OVRDBF FILE(SHIPMENTS) TOFILE(INVLIB/SHIPMENTS)  
CALL PGM(ACGLIB/PRTINVOICE)  
CALL PGM(INVLIB/PRTPACKSLP)  
.  
.
```

If program PRTINVOICE generates spooled file INVOICES and program PRTPACKSLP generates spooled file PACKSLIP then the following changes will merge the 2 spooled files into one new spooled file:

**Note:** In this example the customer number is 9 positions long and is located at line 2 position 12 in the invoices and at line 15 position 44 in the packing slips.

```
.
.
OVRDBF      FILE(CUSTOMER) TOFILE(ACGLIB/CUSTOMER)
OVRDBF      FILE(OPNINVOICE) TOFILE(ACGLIB/OPNINVOICE)
OVRDBF      FILE(SHIPMENTS) TOFILE(INVLIB/SHIPMENTS)
OVRPRTF     FILE(INVOICES) HOLD(*YES) /* Can't let it print */
CALL        PGM(ACGLIB/PRTINVOICE)
OVRPRTF     FILE(PACKSLIP) HOLD(*YES) /* Can't let it print */
CALL        PGM(INVLIB/PRTPACKSLP)
MRGSPLF     MRGFILE((INVOICES * *LAST (2 12 9)) +
                   (PACKSLIP * *LAST (15 44 9))) +
            TOFILE(INVPCKSLP)
RLSSPLF     FILE(INVOICES) SPLNBR(*LAST) /* Now it can print */
RLSSPLF     FILE(PACKSLIP) SPLNBR(*LAST) /* Now it can print */
RLSSPLF     FILE(INVPCKSLP) SPLNBR(*LAST)
.
.
```

The 2 spooled files are merged into one new spooled file with the name INVPCKSLP which contains the invoice for customer number 1 followed by the packing slip for customer number 1 then the invoice for customer number 2, etc.

The spooled files are processed as soon as they are generated.

---

## Manually Processing Spooled Files

Dicer can be implemented by assigning an operator the task of manually processing spooled files. The Merge Spooled File (MRGSPLF) command can be run from any command line, from the DICER menu, or from Dicer's Work with Gumbo Spooled Files (WRKGSISPLF) or Work with Gumbo Output Queue (WRKGSIOUQ) commands.

---

## Example Source Code

Additional information, and example source code is contained in file DICER/DCSOURCE. The file includes:

### User Defined Option

The MRGSPLF user defined option program demonstrates the correct parameter list and is a good starting point for creating a new CL based option to run the MRGSPLF command from IBM supplied spooled file panels WRKSPLF, WRKOUTQ and WRKJOB OPTION(\*SPLF).

---

## Useful Spooled File Information

IBM i provides powerful printing capabilities collectively known as AFP (Advanced Function Presentation). If you use IPDS printers you also need PSF/400. Otherwise, the base operating system gives you everything you need to take advantage of the power of AFP. For example, you can create overlays (electronic forms) to replace preprinted forms and print invoices on plain paper on your laser printers.

Detailed information on AFP can be found in the *Printing > Advanced Function Presentation (AFP)* topic of the IBM i Information Center at <http://publib.boulder.ibm.com/eserver/ibmi.html>.

The single best source that we've found for information on all aspects of IBM i printing is the Redbook *Printing V SG24-4389* (and its replacement *Printing VI SG24-6250*). The books are available for download in the PDF format at <http://www.redbooks.ibm.com>.

The Redbook supplements the standard reference documents on printing by providing more specific "how to" information, such as diagrams, programming samples, and working examples. We find that it pulls together the information from other manuals and fits the pieces together in an understandable way.

### **Creating Overlays and Page Segments**

InfoPrint's (formerly IBM's®) AFP Printer Driver is a very useful piece of software that allows you to create IBM i overlays and page segments by "printing" from any PC based application. Best of all, it is free and available for download at [www.infoprintsolutionscompany.com](http://www.infoprintsolutionscompany.com), search on "AFP Printer Driver" or Google "'AFP Printer Driver for Windows" download site:ibm.com'. In addition, Google *AFP AS/400 Programming Sampler* which contains useful tools for compiling the overlays and page segments on IBM i. The sampler.savf was last spotted at <ftp://ftp.software.ibm.com/printers/products/as400>

Additional information is available from the IBM Software Knowledge Base Document Number 5184341, *Creating AFP Resources Using the IBM AFP Printer Drivers*.

Our experience shows that you get the best results using a smaller is better approach to creating overlays and page segments. Trim as much as possible and position instead of creating a page size overlay or page segment. Use the lowest resolution, color depth, etc. that gives acceptable results.

### **\*LINE and \*AFPDSLIN Data**

Our spooled file conversions do not process spooled files with printer device type \*LINE or \*AFPDSLIN. However IBM i allows you to convert these to pure \*AFPDS data which can be processed (most conversions). There are two methods for accomplishing this:

1. The printer file's CVTLINDTA() parameter while creating the spooled file.
2. Respooling an existing \*LINE or \*AFPDSLIN spooled file using CRTAFPDTA/PRTAFPDTA commands.

See Redbook *Printing VI SG24-6250* for details and examples.

---

### **CL Coding Tip**

Many of our commands accept a variable number of values for a given parameter. For example, the Send Spool Mail (SNDSPLMAIL) command accepts up to 300 email addresses on the recipient parameter. When writing CL programs, the problem of how to code for a variable number of email addresses without coding the SNDSPLMAIL command multiple times (once for each address count) arises. The solution is a little known CL trick for coding "no value" in a variable. "No value" is represented in CL by '\*N'. Consider the following program fragment:

```

PGM
DCL      VAR(&ADD1) TYPE(*CHAR) LEN(128) VALUE(' *N' )
DCL      VAR(&ADD2) TYPE(*CHAR) LEN(128) VALUE(' *N' )
DCL      VAR(&ADD3) TYPE(*CHAR) LEN(128) VALUE(' *N' )
      ...
CHGVAR   VAR(&ADD1) VALUE(NOBODY@GUMBO.COM)
      ...
SNDSPLMAIL FILE(QPDSPLIB) TRANSFORM(*TXT) +
           TOSMTPNAME((&ADD1) (&ADD2) (&ADD3))
      ...
ENDPGM

```

Since &ADD2 and &ADD3 contain '\*N' they are treated as if they were not specified on the command and the email is sent to only one address.

---

## Changing Command Defaults

As with any CL command, you can change the default values of the commands found in our products. You do this using the IBM i Change Command Default (CHGCMDDFT) command.

But before you do, there are some gotchas (slang term for "I got you": a trap) you should be aware of. You WILL lose the change each time a new release of the product is installed, and you COULD lose the change when PTFs are applied to the product. You must then reapply the default change.

As an example, to change the default transform on SpoolMail's SNDSPLMAIL command from \*TXT to \*PDF4, run the following:

```
CHGCMDDFT  CMD(SNDSPLMAIL) NEWDFT(' TRANSFORM(*PDF4)')
```

**GUMBO** recommends AGAINST changing command defaults, we know from the calls for support we receive that this regularly causes problems for customers.

---

## Chapter 5 Merge Processing

---

### What's In This Chapter

This chapter describes the spooled file merge processing available with Dicer. The chapter:

- Gives an overview of the merging processing.
- Describes the details of merge processing.
- Describes the limitations of merge processing.

---

### Overview

The Merge Spooled File (MRGSPLF) command retrieves each requested spooled file from IBM i's spool store, merges the contents of the spooled files' print data streams and outputs a new spooled file. Dicer can process spooled files containing the following IBM i print data streams:

<b>*SCS</b>	SNA Character String.
<b>*IPDS</b>	Intelligent Printer Data Stream.
<b>*AFPDS</b>	Advanced Function Presentation Data Stream.

**Note:** The type of data stream produced for a spooled file is determined by the DEVTYPE parameter of the printer file associated with the application.

The following section describes the processing in more detail.

---

### Merge Processing Details

As described above, the Merge Spooled File (MRGSPLF) command retrieves each requested spooled file from IBM i's spool store. It then builds an index over each spooled file based on the Page sort key specified. The entries from each index are sorted together and the print data stream for each page is copied from the original spooled file into a new spooled file.

The attributes of the resulting output spooled file are copied from the first spooled file specified in the merge file list. The new spooled file is given the name specified and placed into the output queue specified.

Since the print data stream is copied unaltered, each source spooled file must contain the same data stream type. You can determine a spooled file's print data stream type by running the Work with Spooled File Attr (WRKSPLFA) command and locating the "Printer device type" value. You can change the print data stream generated by a printer file by overriding (OVRPRTF) or changing (CHGPRTF) it's DEVTYPE() parameter.

If Generate multiple files SPLIT(\*YES) is specified on the Merge Spooled File (MRGSPLF) command, a new spooled file is created each time the Page sort key data in the index entry changes. Each resulting spooled file has its User data (USRDTA) attribute set to the first 10 characters of the Page sort key data.

---

### Merge Processing Limitations

Dicer imposes the following limitations:

- The spooled files most contain one of the following print data streams types:

<b>*SCS</b>	SNA Character String.
-------------	-----------------------

**\*IPDS** Intelligent Printer Data Stream.  
**\*AFPDS** Advanced Function Presentation Data Stream.

- Each spooled file in a single merge must have the same print data stream types.
- The combined sorted index used to process the output spooled file is limited by the current implementation to 16 Meg. Each page entry is 32 bytes long and there is overhead of 1K plus an additional 1K per source spooled file. Therefore the total number of pages of combined output is limited to approximately 750,000 pages.
- The attributes of the output spooled file are copied from those of the first source spooled file specified. If the source spooled files are sufficiently dissimilar in their attributes such as page size, an unprintable spooled file may result.

---

## Chapter 6 Commands

---

### What's In This Chapter

This chapter describes the control language (CL) commands supplied by Dicer. The commands are arranged in alphabetic order by command name (mnemonic). Each description includes environment and threadsafe classification, a brief general description, detailed parameter explanations, examples and message information. Additional explanatory material can be found in the *Programming > Control Language > CL Concepts > CL Commands > CL command information and documentation* topic in the IBM i Information Center at <http://publib.boulder.ibm.com/eserver/ibmi.html>.

---

## Archive Spooled File (ARCSPLF)

Where allowed to run: All environments (\*ALL)  
Threadsafe: No

The Archive Spooled File (ARCSPLF) command creates a spooled file archive which can be saved and restored, and from which the spooled file can be retrieved (recreated).

---

### Parameters

Keyword	Description	Choices	Notes
<b>FILE</b>	Spooled file	<i>Name</i>	Required, Positional 1
<b>ARC</b>	Spooled file archive	<i>Qualified object name</i>	Optional
	Qualifier 1: Spooled file archive	<i>Name</i> , <b>*GEN</b>	
	Qualifier 2: Library	<i>Name</i> , <b>*CURLIB</b>	
<b>JOB</b>	Job name	Single values: <b>*</b> Other values: <i>Qualified job name</i>	Optional
	Qualifier 1: Job name	<i>Name</i>	
	Qualifier 2: User	<i>Name</i>	
	Qualifier 3: Number	000000-999999	
<b>SPLNBR</b>	Spool file number	1-999999, <b>*ONLY</b> , <b>*LAST</b> , <b>*ANY</b>	Optional
<b>JOBSYSNAME</b>	Job system name	<i>Name</i> , <b>*ONLY</b> , <b>*CURRENT</b> , <b>*ANY</b>	Optional
<b>CRTDATE</b>	Spooled file created	Single values: <b>*ONLY</b> , <b>*LAST</b> Other values: <i>Element list</i>	Optional
	Element 1: Creation date	<i>Date</i>	
	Element 2: Creation time	<i>Time</i> , <b>*ONLY</b> , <b>*LAST</b>	

---

### Spooled file (FILE)

Specifies the name of the spooled file to process. CHAR(10)

This is a required parameter.

***name*** Specify the name of the spooled file.

---

### Spooled file archive (ARC)

Specifies the name of the archive that contains the spooled file.

#### Qualifier 1: Spooled file archive

**\*GEN** Generate the archive name from the supplied FILE, JOB, and SPLNBR parameters.

***name*** Specify the name of the archive.

#### Qualifier 2: Library

**\*CURLIB** Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.

***name*** Specify the name of the library.

---

### Job name (JOB)

Specifies the job that contains the spooled file.

#### Single values

**\*** The job that issued the command.

#### Qualifier 1: Job name

***name*** Specify the name of the job. CHAR(10)

## Qualifier 2: User

*name* Specify the name that identifies the user profile under which the job is run. CHAR(10)

## Qualifier 3: Number

*000000-999999* Specify the system assigned job number. CHAR(6)

---

## Spool file number (SPLNBR)

Specifies the number of the spooled file. INT(4)

- \*LAST** The highest numbered spooled file with the specified file name is used.
- \*ONLY** Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is not necessary.
- \*ANY** The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.
- 1-999999** Specify the number of the spooled file.

---

## Job system name (JOBSYSNAME)

Specifies the system where the job that created the spooled file (JOB parameter) ran. This parameter is considered after the job name, user name, job number, spooled file name, and spooled file number parameter requirements have been met.

- \*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, and spooled file create date and time.
- \*CURRENT** The spooled file created on the current system with the specified job name, user name, job number, spooled file name, spooled file number, and create date and time is used.
- \*ANY** The job system name is not used to determine which spooled file is used. Use this value when the spooled file create date and time parameter is to take precedence over the job system name when selecting a spooled file.
- name*** Specify the name of the system where the job that created the spooled file ran.

---

## Spooled file created (CRTDATE)

Specifies the date and time the spooled file was created. This parameter is considered after the job name, user name, job number, spooled file name, spooled file number, and job system name parameter requirements have been met.

### Single values

- \*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, and job system name.
- \*LAST** The spooled file with the latest create date and time of the specified job name, user name, job number, spooled file name, spooled file number, and job system name is used.

### Element 1: Creation date

***date*** Specify the date the spooled file was created.

### Element 2: Creation time

- \*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, job system name, and spooled file create date.
- \*LAST** The spooled file with the latest create time of the specified job name, user name, job number, spooled file name, spooled file number, job system name, and spooled file create date is used.
- time*** Specify the time the spooled file was created.

---

## Examples

### Example 1:

```
ARCSPLF FILE(QSYSPRT)
```

This command archives the last spooled file named QSYSPRT. The current job is searched to locate the file. The archive is placed in the job's \*CURLIB.

### Example 2:

```
ARCSPLF FILE(QPQUPRFIL) ARC(QGPL/*GEN) SPLNBR(3)
```

The file named QPQUPRFIL, which is spooled file number 3 in the job executing this command, is archived. The archive is placed in library QGPL.

---

## Error messages

### \*ESCAPE messages

**SPLA106**        Unable to archive spooled file for job //.

---

## Change Dicer Authorization (CHGDCRAUT)

**Where allowed to run:** All environments (\*ALL)  
**Threadsafe:** No

The Change Dicer Authorization (CHGDCRAUT) command changes the authorization code for Dicer. The command is used to extend a demonstration period or to permanently authorize Dicer for a system or a partition.

The proposed authorization information is tested against the authorization algorithm to confirm that it will authorize Dicer. If the test fails, no change is made.

---

### Parameters

Keyword	Description	Choices	Notes
<a href="#">AUTH</a>	Authorization code	<i>Hexadecimal value</i>	Required, Positional 1
<a href="#">EXPDAT</a>	Expiration date (CCYYMMDD)	<i>Character value, *NONE</i>	Optional, Positional 2
<a href="#">LICTYP</a>	License type	<i>*SYS, *LPAR</i>	Optional, Positional 3
<a href="#">PRCMAX</a>	Processor maximum capacity	<i>Decimal number</i>	Optional, Positional 4

---

### Authorization code (AUTH)

Specifies the authorization code to use. The authorization code is 8 hex digits that may be entered in upper or lower case.

This is a required parameter.

***hexadecimal-value*** Specify the case insensitive authorization code.

---

### Expiration date (CCYYMMDD) (EXPDAT)

Specifies the date on which the authorization expires.

**\*NONE** The authorization is permanent.  
***date*** The date on which the authorization expires in CCYYMMDD format.

---

### License type (LICTYP)

Specifies the type of license that is authorized.

**\*SYS** The authorization is for a system wide license, which enables any and all partitions on the system but is specific to the processor group.  
**Note:** The authorization code must be entered in each partition.  
**\*LPAR** The license is specific to one of the partitions on the system and specific to a number of processors within the partition. A partition license must be entered in the partition for which it is intended.

---

### Processor maximum capacity (PRCMAX)

Specifies the maximum processor capacity for which the partition is licensed. The value is expressed in terms of processors where 1.00 is 100% of a processor's capacity or the same as 1 processor, .50 is 50% of a processor's capacity or .5 processors, 2.00 is 200% of a processor's capacity or 2 processors, etc.

***decimal-number*** Specify the maximum processor capacity.

---

## Examples

### Example 1:

```
CHGDCRAUT AUTH(01234567)
```

This command changes the authorization code to a permanent system wide license code.

### Example 2:

```
CHGDCRAUT AUTH(01234567) LICTYP(*LPAR) PRCMAX(1.3)
```

This command changes the authorization code to a permanent partition only license code for 1.3 processors in the current partition.

---

## Error messages

### \*ESCAPE messages

**AUT9909** Dicer authorization change was not performed.

---

## Change Dicer Default (CHGDCRDFT)

**Where allowed to run:** All environments (\*ALL)  
**Threadsafe:** No

The Change Dicer Default (CHGDCRDFT) command changes values used by Dicer to control processing and other activities.

---

### Parameters

Keyword	Description	Choices	Notes
SIXSIC	Spool Index SCS Control	*ORDINAL, *RELATIVE, * <u>SAME</u> , 0, 64, -1	Optional, Positional 1

---

### Spool Index SCS Control (SIXSIC)

Specifies the spooled file indexing method for \*SCS files in the presence of lines per inch (LPI) changes or font changes within a page. Spooled file indexing occurs when line and position values are required to process a request. Examples are filtering, or specifying page data. This setting can only affect the determination of line numbers if the spooled file contains \*SCS and if the LPI or font changes within a page.

**\*SAME** The value is not changed.

**\*ORDINAL** This is the recommended value. Line numbers and position numbers are calculated using a deterministic, repeatable method that typically returns line and position values as they were specified in the DDS for the printer file.

**\*RELATIVE** This value gives the original indexing behavior. The method returns line and position numbers that may vary from page to page for data that otherwise appears in the same position. The variance depends on the data's position relative to preceding data on the page.

---

### Examples

```
CHGDCRDFT SIXSIC( *ORDINAL )
```

This command changes the Spool Index SCS Control to \*ORDINAL.

```
CHGDCRDFT SIXSIC( *RELATIVE )
```

This command changes the Spool Index SCS Control to \*RELATIVE.

---

## Check Dicer Authorization (CHKDCRAUT)

Where allowed to run: All environments (\*ALL)  
Threadsafe: No

The Check Dicer Authorization (CHKDCRAUT) command executes Dicer's authorization verification function. This allows you to determine whether and how the product is authorized for use.

---

### Parameters

Keyword	Description	Choices	Notes
MSGQ	Message queue	Single values: <b>*NONE</b> Other values: <i>Qualified object name</i>	Optional, Positional 1
	Qualifier 1: Message queue	<i>Name</i>	
	Qualifier 2: Library	<i>Name</i> , <b>*LIBL</b> , <b>*CURLIB</b>	

---

### Message queue (MSGQ)

Specifies a message queue that should receive messages if the product is not permanently authorized.

#### Single values

**\*NONE** Messages are not sent to an external message queue.

#### Qualifier 1: Message queue

*name* Specify the name message queue that receives messages.

#### Qualifier 2: Library

**\*LIBL** All libraries in the thread's library list are searched.

**\*CURLIB** Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.

*name* Specify the name of the library.

---

### Examples

#### Example 1:

```
CHKDCRAUT
```

This command executes Dicer's authorization verification function to determine whether and how the product is authorized for use.

#### Example 2:

```
CHKDCRAUT MSGQ(QSYSOPR)
```

This command executes Dicer's authorization verification function to determine whether and how the product is authorized for use. If the product is not permanently authorized for use, a failure message is sent to the system operator's message queue.

---

### Error messages

#### \*ESCAPE messages

**AUT9901** We're sorry, the Dicer demonstration period is over.  
**AUT9905** Unable to access machine information.  
**AUT9907** Dicer processor group change grace period has expired.  
**AUT9916** Dicer release upgrade grace period has expired.  
**AUT9918** We're sorry, more than 30 days have elapsed since the Dicer was first installed.  
**AUT9921** Dicer unpartitioned system grace period has expired.  
**AUT9926** Dicer processor limit exceeded grace period has expired.  
**AUT9930** Dicer authorization check failed.

---

## Create Spool Save File (CRTSPLSAVF)

Where allowed to run: All environments (\*ALL)  
Threadsafe: No

The Create Spool Save File (CRTSPLSAVF) command creates a save file containing a spooled file and all its related resources. The save file is suitable for emailing with a problem report.

---

### Parameters

Keyword	Description	Choices	Notes
<b>FILE</b>	Spooled file	<i>Name</i>	Required, Positional 1
<b>SAVF</b>	Save file	<i>Qualified object name</i>	Required, Positional 2
	Qualifier 1: Save file	<i>Name</i>	
	Qualifier 2: Library	<i>Name, *CURLIB</i>	
<b>JOB</b>	Job name	Single values: <i>_</i> Other values: <i>Qualified job name</i>	Optional
	Qualifier 1: Job name	<i>Name</i>	
	Qualifier 2: User	<i>Name</i>	
	Qualifier 3: Number	000000-999999	
<b>SPLNBR</b>	Spool file number	1-999999, *ONLY, *LAST, *ANY	Optional
<b>SAVRSC</b>	Save resources	*YES, *NO, Y, N	Optional
<b>MSG</b>	Message	<i>Character value, *NONE</i>	Optional

---

### Spooled file (FILE)

Specifies the name of the spooled file to process. CHAR(10)

This is a required parameter.

***name*** Specify the name of the spooled file.

---

### Save file (SAVF)

Specifies the name of the save file that is used to contain spooled file data. The saved file must not exist and will be created by the command.

This is a required parameter.

#### Qualifier 1: Save file

***name*** Specify the save file name.

#### Qualifier 2: Library

**\*CURLIB** Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.

***name*** Specify the name of the library.

---

### Job name (JOB)

Specifies the job that contains the spooled file.

#### Single values

***\_*** The job that issued the command.

#### Qualifier 1: Job name

***name*** Specify the name of the job. CHAR(10)

## Qualifier 2: User

**name** Specify the name that identifies the user profile under which the job is run. CHAR(10)

## Qualifier 3: Number

**000000-999999** Specify the system assigned job number. CHAR(6)

---

## Spool file number (SPLNBR)

Specifies the number of the spooled file. INT(4)

**\*LAST** The highest numbered spooled file with the specified file name is used.  
**\*ONLY** Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is not necessary.  
**\*ANY** The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.  
**1-999999** Specify the number of the spooled file.

---

## Save resources (SAVRSC)

Specifies if external resource such as overlays and page segments are included in the save file.

**\*YES** Resources are saved.  
**\*NO** Resources are not saved.

---

## Message (MSG)

Specifies a short message to include in the save file.

**\*NONE** No message is included.  
**character-value** Specify a short message to include in the save file.

---

## Examples

### Example 1:

```
CRTSPLSAVF FILE(QSYSPRT) SAVF(QGPL/PRBRPT)
```

This command creates save file PRBRPT in library QGPL. The last spooled file named QSYSPRT is saved along with its resources. The current job is searched to locate the file.

### Example 2:

```
CRTSPLSAVF FILE(QPQUPRFIL) SAVF(NEWPRB) SPLNBR(3)
```

The file named QPQUPRFIL, which is spooled file number 3 in the job executing this command, is saved to save file NEWPRB. The save file is placed in job's \*CURLIB.

---

## Error messages

### \*ESCAPE messages

**SPLE101** Unable to create spool save file for job //.

---

## Dump Page Index Positions (DMPPIP)

Where allowed to run: All environments (\*ALL)  
Threadsafe: No

The Dump Page Index Positions (DMPPIP) command prints the line and position values, for data found in the spooled file, as calculated by the software. These are used to specify data selection criteria for the spooled file.

---

### Parameters

Keyword	Description	Choices	Notes
<b>FILE</b>	Spooled file	<i>Name</i> , *LASTCRT	Required, Positional 1
<b>JOB</b>	Job name	Single values: <u>_</u> Other values: <i>Qualified job name</i>	Optional, Positional 2
	Qualifier 1: Job name	<i>Name</i>	
	Qualifier 2: User	<i>Name</i>	
	Qualifier 3: Number	000000-999999	
<b>SPLNBR</b>	Spool file number	1-999999, *ONLY, * <b>LAST</b>	Optional, Positional 3
<b>PAGERANGE</b>	Page range to print	<i>Element list</i>	Optional, Positional 4
	Element 1: Starting page	<i>Integer</i> , <u>1</u> , *ENDPAGE	
	Element 2: Ending page	<i>Integer</i> , * <b>END</b>	

---

### Spooled file (FILE)

Specifies the name of the spooled file to process. CHAR(10)

This is a required parameter.

- \*LASTCRT** The last spooled file created by the current job or thread is identified using the QSPRILSP API and processed. This is useful for jobs that create spooled files under other user profiles, which consequently end up in the user's QPRTJOB. When \*LASTCRT is specified, the JOB() and SPLNBR() parameters are ignored.
- name*** Specify the name of the spooled file.

---

### Job name (JOB)

Specifies the job that contains the spooled file.

#### Single values

- \_** The job that issued the command.

#### Qualifier 1: Job name

- name*** Specify the name of the job. CHAR(10)

#### Qualifier 2: User

- name*** Specify the name that identifies the user profile under which the job is run. CHAR(10)

#### Qualifier 3: Number

- 000000-999999** Specify the system assigned job number. CHAR(6)

---

### Spool file number (SPLNBR)

Specifies the number of the spooled file. INT(4)

- \*LAST** The highest numbered spooled file with the specified file name is used.
- \*ONLY** Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is

<b>*ANY</b>	not necessary. The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.
<b>1-999999</b>	Specify the number of the spooled file.

## Page range to print (PAGERANGE)

Specifies the starting and ending pages to process.

### Element 1: Starting page

<u>1</u>	Processing begins at page 1.
<b>*ENDPAGE</b>	The starting page to print is the ending page to print. Only the ending page is printed.
<i>integer</i>	Specify the starting page.

### Element 2: Ending page

<u>*END</u>	Processing continues until the end of file.
<i>integer</i>	Specify the ending page.

## Examples

### Example 1:

```
DMPPIP      FILE(QSYSPRT)
            JOB(033194/QPGMR/MONTHEND) SPLNBR(2)
```

This command dumps data position information for spooled file number 2, QSYSPRT, from job 033194/QPGMR/MONTHEND.

### Example 2:

```
DMPPIP      FILE(QSYSPRT) PAGERANGE(3 4)
```

This command dumps data position information for the last spooled file with name QSYSPRT from the job running the command. Only the data for pages 3 and 4 is dumped.

## Error messages

### \*ESCAPE messages

<b>SIX0001</b>	Unable to dump page index positions for file .
----------------	--

## Display Page Data (DSPPAGDTA)

Where allowed to run: All environments (\*ALL)  
 Threadsafte: No

The Display Page Data (DSPPAGDTA) command shows the contents of a spooled file's pages at specified locations. The contents can be shown, printed, or directed to database output file (OUTFILE).

### Parameters

Keyword	Description	Choices	Notes
<b>FILE</b>	Spooled file	Name, *LASTCRT	Required, Positional 1
<b>PAGDTA</b>	Page data	Values (up to 12 repetitions): <i>Element list</i>	Required, Positional 2
	Element 1: Line	1-255, *STRPAGGRP, *DOCIDXTAG, *DOCIDXPAG, *DOCIDXGRP, *STRPAGGRPP, *DOCIDXTAGP, *DOCIDXGRPP	
	Element 2: Position	1-378, 0	
	Element 3: Length	1-255, 0	
<b>JOB</b>	Job name	Single values: _ Other values: <i>Qualified job name</i>	Optional, Positional 3
	Qualifier 1: Job name	Name	
	Qualifier 2: User	Name	
	Qualifier 3: Number	000000-999999	
<b>SPLNBR</b>	Spool file number	1-999999, *ONLY, *LAST	Optional, Positional 4
<b>OUTPUT</b>	Output	_, *PRINT, *OUTFILE	Optional
<b>OUTFILE</b>	File to receive output	<i>Qualified object name</i>	Optional
	Qualifier 1: File to receive output	Name	
	Qualifier 2: Library	Name, *LIBL, *CURLIB	
<b>OUTMBR</b>	Output member options	<i>Element list</i>	Optional
	Element 1: Member to receive output	Name, *FIRST	
	Element 2: Replace or add records	*REPLACE, *ADD	

### Spooled file (FILE)

Specifies the name of the spooled file to process. CHAR(10)

This is a required parameter.

- \*LASTCRT** The last spooled file created by the current job or thread is identified using the QSPRILSP API and processed. This is useful for jobs that create spooled files under other user profiles, which consequently end up in the user's QPRTJOB. When \*LASTCRT is specified, the JOB() and SPLNBR() parameters are ignored.
- name** Specify the name of the spooled file.

### Page data (PAGDTA)

Specifies the location (line, position and length), on the page of the spooled file, from which data is retrieved. INT(2), INT(2), INT(2) The most accurate method for determining the data location is to print a formatted dump of a sample spooled file using our Dump Page Index Positions (DMPPIP) command.

This is a required parameter.

#### Element 1: Line

- \*STRPAGGRP** Data specified on the DDS STRPAGGRP() keyword is retrieved. These keywords inherit the page

number of the next page to occur in the spooled file.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*DOCIDXTAG** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Tags specified at both the "page" level and "group" level are processed. "Group" level tags inherit the page number of the next page to occur in the spooled file.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*DOCIXPAG** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "page" level are processed.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*DOCIXGRP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "group" level are processed. These tags inherit the page number of the next page to occur in the spooled file.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*STRPAGGRP** Data specified on the DDS STRPAGGRP() keyword is retrieved. These keywords inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the keyword was specified directly on each subsequent page in the group.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*DOCIDXTAGP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Tags specified at both the "page" level and "group" level are processed. "Group" level tags inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the "group" level tag was specified directly on each subsequent page in the group.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**\*DOCIXGRP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "group" level are processed. These tags inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the "group" level tag was specified directly on each subsequent page in the group.

This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.

**1-255** Specify the line number where the data is located on the page.

## Element 2: Position

**1-378** Specify the position where the data is located in the line. Valid values range from 1 through 378. The value specified plus the data length should be less than the number of print positions in the spooled file.

## Element 3: Length

**1-255** Specify the length of the data. The value specified plus the start position should be less than the number of print positions in the spooled file.

---

## Job name (JOB)

Specifies the job that contains the spooled file.

## Single values

**\*** The job that issued the command.

### Qualifier 1: Job name

**name** Specify the name of the job. CHAR(10)

### Qualifier 2: User

**name** Specify the name that identifies the user profile under which the job is run. CHAR(10)

### Qualifier 3: Number

**000000-999999** Specify the system assigned job number. CHAR(6)

---

## Spool file number (SPLNBR)

Specifies the number of the spooled file. INT(4)

**\*LAST** The highest numbered spooled file with the specified file name is used.

**\*ONLY** Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is not necessary.

**\*ANY** The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.

**1-999999** Specify the number of the spooled file.

---

## Output (OUTPUT)

Specifies where the output from the command is sent. CHAR(10)

**\*** The output is displayed (if requested by an interactive job) or printed with the job's spooled output (if requested by a batch job).

**\*PRINT** The output is printed with the job's spooled output.

**\*OUTFILE** The output is directed to the database file specified on the **File to receive output** prompt (OUTFILE parameter).

---

## File to receive output (OUTFILE)

Specifies the name and library of the database file to which the output of the command is directed. If the file does not exist, the command creates one in the specified library. CHAR(10) CHAR(10)

### Qualifier 1: File to receive output

**name** Specify the name of the file to which the output of the command is directed.

### Qualifier 2: Library

**\*LIBL** All libraries in the thread's library list are searched.

**\*CURLIB** Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.

**name** Specify the name of the library.

Data is output in the PDPAGDRF record format which is documented in the appendix.

---

## Output member options (OUTMBR)

Specifies the name of the database file member that receives the output of the command. CHAR(10) CHAR(10)

### Element 1: Member to receive output

**\*FIRST** The first member in the file receives the output. If it does not exist, the system creates a member with the name of the file specified in the **File to receive output** prompt (OUTFILE parameter). If the member already exists, you have the option to add new records to the end of the existing member or clear the

*name* member and then add the new records.  
Specify the name of the member that receives the output. If it does not exist, the system creates it.

## Element 2: Replace or add records

**\*REPLACE** The system clears the existing member and adds the new records.  
**\*ADD** The system adds the new records to the end of the existing records.

---

## Examples

### Example 1:

```
DSPPAGDTA FILE(QSYSVRT)
           PAGDTA((3 4 10) (*STRPAGGRP))
           JOB(033194/QPGMR/MONTHEND) SPLNBR(2)
```

This command displays data from line 3, position 4 for a length of 10 from each page in the spooled file as well as the page group names added using the STRPAGGRP() DDS keyword. The spooled file processed is file number 2, QSYSVRT, from job 033194/QPGMR/MONTHEND.

### Example 2:

```
DSPPAGDTA FILE(INVOICE) PAGDTA(( *DOCIDXTAG ) )
           OUTPUT( *OUTFILE )
           OUTFILE(HISTORY/INVSPLF)
           OUTMBR( *FIRST *ADD)
```

This command retrieves data stored in DOCIDXTAG() DDS keywords for all pages of the spooled file INVOICE found in the current job. The data is added to the first member of the file INVSPLF found in library HISTORY.

---

## Error messages

### Parameter dependencies

**GCM7014** OUTFILE parameter required with OUTPUT(\*OUTFILE).  
**GCM7015** OUTFILE parameter can only be specified with OUTPUT(\*OUTFILE).  
**GCM7016** OUTMBR parameter can only be specified with OUTPUT(\*OUTFILE).

### \*ESCAPE messages

**SIX0045** Unable to display page data for file .

## Merge Spooled File (MRGSPLF)

Where allowed to run: All environments (\*ALL)  
 Threadsafes: No

The Merge Spooled File (MRGSPLF) command combines the pages of one or more spooled files to create a new spooled file and optionally sorts the pages.

### Parameters

Keyword	Description	Choices	Notes
<b>MRGFILE</b>	Merge input list	Values (up to 300 repetitions): <i>Element list</i>	Required, Positional 1
	Element 1: Spooled file	<i>Name</i>	
	Element 2: Job name	Single values: * Other values: <i>Qualified job name</i>	
	Qualifier 1: Job name	<i>Name</i>	
	Qualifier 2: User	<i>Name</i>	
	Qualifier 3: Number	000000-999999	
	Element 3: Spool file number	1-999999, * <b>LAST</b> , * <b>ONLY</b> , * <b>ANY</b>	
	Element 4: Page sort key	Single values: * <b>NONE</b> , *STRPAGGRP Other values: <i>Element list</i>	
	Element 1: Line	1-255	
	Element 2: Position	1-378	
	Element 3: Length	1-255	
	Element 5: Page range to print	<i>Element list</i>	
	Element 1: Starting page	<i>Integer</i> , <b>1</b> , *ENDPAGE	
	Element 2: Ending page	<i>Integer</i> , * <b>END</b>	
	Element 6: Job system name	<i>Name</i> , * <b>ONLY</b> , *CURRENT, *ANY	
	Element 7: Spooled file created	Single values: * <b>ONLY</b> , *LAST Other values: <i>Element list</i>	
Element 1: Creation date	<i>Date</i>		
Element 2: Creation time	<i>Time</i> , * <b>ONLY</b> , *LAST		
<b>TOFILE</b>	To spooled file name	<i>Name</i> , * <b>FIRST</b>	Optional, Positional 2
<b>TOOUTQ</b>	To output queue	Single values: * <b>FIRST</b> Other values: <i>Qualified object name</i>	Optional, Positional 3
	Qualifier 1: To output queue	<i>Name</i>	
	Qualifier 2: Library	<i>Name</i> , * <b>LIBL</b> , *CURLIB	
<b>SPLIT</b>	Generate multiple files	* <b>NO</b> , *YES	Optional, Positional 4
<b>USER</b>	User	<i>Name</i> , * <b>FIRST</b>	Optional, Positional 5
<b>USRDTA</b>	User data	<i>Character value</i> , * <b>FIRST</b>	Optional, Positional 6
<b>USRDFNDTA</b>	User Defined Data	<i>Character value</i> , * <b>FIRST</b>	Optional, Positional 7

### Merge input list (MRGFILE)

Specifies an input list to the merge. Each input is made up of 7 elements, a spooled file specification (the first three elements, plus the last two elements), its page sort key (the fourth element) and page range specification (the fifth element). The spooled file specified participates in the merge. Each page within the page range is sorted with other pages from the same spooled file and with pages from the other spooled files participating in the merge before the merged (output) spooled file is created.

**Note:** The first spooled file specified supplies the attributes for the spooled file that is created.

### Element 1: Spooled file

**name** Specify the name of the spooled file.

### Element 2: Job name

**Single values** **\_** The job that issued the command.  
**Qualifier 1: Job name** **name** Specify the name of the job. CHAR(10)  
**Qualifier 2: User** **name** Specify the name that identifies the user profile under which the job is run.  
CHAR(10)  
**Qualifier 3: Number** **000000-999999** Specify the system assigned job number. CHAR(6)

### Element 3: Spool file number

**\*LAST** The highest numbered spooled file with the specified file name is used.  
**\*ONLY** Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is not necessary.  
**\*ANY** The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.  
**1-999999** Specify the number of the spooled file.

### Element 4: Page sort key

**Single values** **\*NONE** No page sorting is performed.  
**\*STRPAGGRP** Pages are sorted based on the name of the page group to which they belong. For \*AFPDS spooled files page groups can be created and named using the DDS STRPAGGRP and ENDPAGGRP keywords.  
**Element 1: Line** **1-255** Specify the line number containing the data by which the page is sorted.  
**Element 2: Position** **1-378** Specify the start position within line of the data by which the page is sorted. The value specified plus the length of the data should be less than the number of print positions in the spooled file.  
**Element 3: Length** **1-255** Specify the length of the data by which the page is sorted. The value specified plus the start position should be less than the number of print positions in the spooled file.

### Element 5: Page range to print

**Element 1: Starting page** **1** Processing begins at page 1.  
**\*ENDPAGE** The starting page to print is the ending page to print. Only the ending page is printed.  
**integer** Specify the starting page.  
**Element 2: Ending page** **\*END** Processing continues until the end of file.  
**integer** Specify the ending page.

### Element 6: Job system name :

**\*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, and spooled file create date and time.  
**\*CURRENT** The spooled file created on the current system with the specified job name, user name, job number, spooled file name, spooled file number, and create date and time is used.  
**\*ANY** The job system name is not used to determine which spooled file is used. Use this value when the spooled file create date and time parameter is to take precedence over the job system name when selecting a spooled file.  
**name** Specify the name of the system where the job that created the spooled file ran.

### Element 7: Spooled file created

**Single values** **\*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, and job system name.  
**\*LAST** The spooled file with the latest create date and time of the specified job name, user name, job number, spooled file name, spooled file number, and job system name is used.  
**Element 1: Creation date** **date** Specify the date the spooled file was created.  
**Element 2: Creation time** **\*ONLY** There is one spooled file with the specified job name, user name, job number, spooled file name, spooled file number, job system name, and spooled file create

	date.
<b>*LAST</b>	The spooled file with the latest create time of the specified job name, user name, job number, spooled file name, spooled file number, job system name, and spooled file create date is used.
<b>time</b>	Specify the time the spooled file was created.

---

### To spooled file name (TOFILE)

Specifies the name of the merged (output) spooled file.

<b>*FIRST</b>	The name of the spooled file is that of the first spooled file.
<b>name</b>	Specify the name of the spooled file.

---

### To output queue (TOOUTQ)

Specifies the name of the output queue to receive the merged (output) spooled file.

#### Single values

<b>*FIRST</b>	The output queue name is that of the first spooled file.
---------------	--

#### Qualifier 1: Output queue

<b>name</b>	Specify the name of the output queue.
-------------	---------------------------------------

#### Qualifier 2: Library

<b>*LIBL</b>	All libraries in the thread's library list are searched.
<b>*CURLIB</b>	Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.
<b>name</b>	Specify the name of the library.

---

### Generate multiple files (SPLIT)

Specifies whether or not a new spooled file is created each time the Page sort key changes.

<b>*NO</b>	The combined output of the merge is placed in a single spooled file.
<b>*YES</b>	For each unique value found in the Page sort key a new spooled file is created.

---

### User (USER)

Specifies the user profile to own the merged (output) spooled file.

<b>*FIRST</b>	The user owning the spooled file is that of the first spooled file.
<b>name</b>	Specify the name of the user profile.

---

### User data (USRDTA)

Specifies the user data of the merged (output) spooled file.

<b>*FIRST</b>	The user data is that of the first spooled file.
<b>character-value</b>	Specify up to 10 characters of data assigned to the spooled file.

---

### User Defined Data (USRDFNDA)

Specifies the user defined data of the merged (output) spooled file.

<b>*FIRST</b>	The user data is that of the first spooled file.
<b>character-value</b>	Specify user-defined data to be used by user applications or user-specified programs that process spooled files. All characters are acceptable.

---

## Examples

### Example 1:

```
MRGSPLF MRGFILE((QSYSPRT)) TOFILE(NEWFILE) TOOUTQ(PRT01)
```

The last spooled file from the current job with the name QSYSPRT is simply duplicated. The new duplicate is given the name NEWFILE and placed in output queue PRT01.

### Example 2:

```
MRGSPLF MRGFILE((QSYSPRT) (QPRINT))
```

This command combines the contents of the last spooled file named QSYSPRT followed by the contents of the last spooled file named QPRINT with no sorting of pages. The current job is searched to locate the files. The new spooled file has the same attributes as QSYSPRT and is placed on the same output queue.

### Example 3:

```
MRGSPLF MRGFILE((QPQUPRFIL * 3 (2 3 8))  
                (QPRINT * 4 (1 120 6))) SPLIT(*YES)
```

The file named QPQUPRFIL, which is spooled file number 3 in the job executing this command, is merged with the file named QPRINT, which is spooled file number 4 in the job executing the command. The combined set of pages is sorted based on the 8 characters found at line 2 position 3 of each page in QPQUPRFIL and on the 6 characters found at line 1 position 120 of each page in QPRINT. Each time the data at these positions changes, a new spooled file is created.

---

## Error messages

### \*ESCAPE messages

**SPLB105** Merge failed.

---

## Retrieve Gumbo PTF (RTVGSIPTF)

**Where allowed to run:** All environments (\*ALL)  
**Threadsafe:** No

The Retrieve Gumbo PTF (RTVGSIPTF) command checks a remote system for new product PTFs, and, if available, downloads and installs them.

The command assumes that IBM i has connectivity to the PTF server. Unless you are running your own internal server hosting our PTFs, this means that IBM i has access to the internet and that FTP is not blocked by a firewall.

The command first checks the availability of new PTFs by retrieving a product and release specific file (Ex. q1c90LastPtf.txt) from the remote system and comparing its contents to the last PTF applied locally. If newer PTFs are available, a product and release specific PTF save file (Ex. q1c90all.svf) is downloaded, and the PTFs it contains are loaded and applied.

**Note: GUMBO** only delivers immediate PTFs. Immediate PTFs do not require an IPL and an IPL is never performed by the command.

---

### Parameters

Keyword	Description	Choices	Notes
<b>LICPGM</b>	Product	Character value, <b>*THIS</b> , 2A55DCR, 2A55DMP, 2A55RDA, 2A55RM1, 2A55SAM, 2A55SM1, 2A55SM2, 2A55XL1	Optional, Positional 1
<b>RLS</b>	Release	Character value, <b>*THIS</b>	Optional, Positional 2
<b>CHECK</b>	Check	<b>*YES</b> , *NO, *ONLY	Optional
<b>RMTSYS</b>	Remote system	Character value, <b>*GUMBOFTP</b>	Optional

---

### Product (LICPGM)

Specifies the product for which PTFs are retrieved. All **GUMBO** products take the form 2A55tla where "tla" identifies the product. Run DSPSFWRSC to determine which **GUMBO** products are installed.

CHAR(7)

<b>*THIS</b>	Use the product (2A55DCR) containing this copy of the Retrieve Gumbo PTF (RTVGSIPTF) command.
<b>2A55DCR</b>	Dicer
<b>2A55DMP</b>	Dumpster
<b>2A55RDA</b>	Report Designer
<b>2A55RM1</b>	Report Manager
<b>2A55SAM</b>	Spool-a-Matic
<b>2A55SM1</b>	SpoolMail
<b>2A55SM2</b>	Gumbo Mail
<b>2A55XL1</b>	Excel-erator
<b>character-value</b>	Specifies the 7-character identifier of the product for which PTFs are retrieved.

---

### Release (RLS)

Specifies the release for which PTFs are retrieved. Run DSPSFWRSC to determine which **GUMBO** products are installed. CHAR(6)

<b>*THIS</b>	Use the release of the product (V1R9M0) containing this copy of the Retrieve Gumbo PTF (RTVGSIPTF) command.
<b>character-value</b>	Specify the release level of the product in the format VxRyMz, where Vx is the version number, Ry is the release number, and Mz is the modification level.

---

## Check (CHECK)

Specifies if checking for newer PTFs is performed. CHAR(10)

- \*YES** Check for newer PTFs is performed before downloading. If newer PTFs are not available, processing stops.
- \*NO** No check for newer PTFs is performed before downloading.
- \*ONLY** Only a check for newer PTF availability is performed. Nothing is downloaded, regardless of the result.

---

## Remote system (RMTSYS)

Specifies the name of remote system which serves PTF save files for download. CHAR(255)

- \*GUMBOFTP** Use **GUMBO's** FTP server ftp.gumbo.com.
- character-value** Specify the remote system name to use.

---

## Examples

### Example 1:

```
RTVGSIPTF
```

The **GUMBO** FTP server is check for new PTFs available for product 2A55DCR release V1R9M0. If available, the PTFs are downloaded and installed.

### Example 2:

```
RTVGSIPTF PRODUCT(2A55DCR) RLS(V1R9M0) CHECK(*ONLY)
```

The **GUMBO** FTP server is check for new PTFs available for product 2A55DCR release V1R9M0. No other processing is performed.

---

## Error messages

### \*ESCAPE messages

- PID1007** Retrieve PTF failed for product .

---

## Retrieve Page Data (RTVPAGDTA)

**Where allowed to run:** Compiled CL (\*BPGM \*IPGM \*BMOD \*IMOD)  
**Threadsafe:** No

The Retrieve Page Data (RTVPAGDTA) command retrieves data from a specific location in a spooled file. The requested data is returned in a Control Language (CL) program variable.

---

### Parameters

Keyword	Description	Choices	Notes
<b>FILE</b>	Spooled file	<i>Name</i> , *LASTCRT	Required, Positional 1
<b>RTNDATA</b>	CL var for data (1-255)	<i>Character value</i>	Required, Positional 2
<b>PAGDTA</b>	Page data	<i>Element list</i>	Required, Positional 3
	Element 1: Line	1-255, *STRPAGGRP, *DOCIDXTAG, *DOCIDXPAG, *DOCIDXGRP, *STRPAGGRPP, *DOCIDXTAGP, *DOCIDXGRPP	
	Element 2: Position	1-378, 0	
	Element 3: Length	1-255, 0	
<b>PAGE</b>	Page number	<i>Unsigned integer</i> , <b>1</b> , *LAST	Optional, Positional 4
<b>JOB</b>	Job name	Single values: <b>_</b> Other values: <i>Qualified job name</i>	Optional, Positional 5
	Qualifier 1: Job name	<i>Name</i>	
	Qualifier 2: User	<i>Name</i>	
	Qualifier 3: Number	000000-999999	
<b>SPLNBR</b>	Spool file number	1-999999, *ONLY, * <b>LAST</b>	Optional, Positional 6

---

### Spooled file (FILE)

Specifies the name of the spooled file to process. CHAR(10)

This is a required parameter.

**\*LASTCRT** The last spooled file created by the current job or thread is identified using the QSPRILSP API and processed. This is useful for jobs that create spooled files under other user profiles, which consequently end up in the user's QPRTJOB. When \*LASTCRT is specified, the JOB() and SPLNBR() parameters are ignored.

**name** Specify the name of the spooled file.

---

### CL var for data (1-255) (RTNDATA)

Specifies the CL variable which is to receive the data returned by the command. The variable can have a declared length between 1 and 255 and it must be as long as or longer than the requested data length. (CHAR).

This is a required parameter.

---

### Page data (PAGDTA)

Specifies the location (line, position and length), on the page of the spooled file, from which data is retrieved. INT(2), INT(2), INT(2) The most accurate method for determining the data location is to print a formatted dump of a sample spooled file using our Dump Page Index Positions (DMPPIP) command.

This is a required parameter.

## Element 1: Line

- \*STRPAGGRP** Data specified on the DDS STRPAGGRP() keyword is retrieved. These keywords inherit the page number of the next page to occur in the spooled file.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*DOCIDXTAG** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Tags specified at both the "page" level and "group" level are processed. "Group" level tags inherit the page number of the next page to occur in the spooled file.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*DOCIXPAG** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "page" level are processed.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*DOCIXGRP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "group" level are processed. These tags inherit the page number of the next page to occur in the spooled file.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*STRPAGGRP** Data specified on the DDS STRPAGGRP() keyword is retrieved. These keywords inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the keyword was specified directly on each subsequent page in the group.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*DOCIDXTAGP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Tags specified at both the "page" level and "group" level are processed. "Group" level tags inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the "group" level tag was specified directly on each subsequent page in the group.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- \*DOCIXGRPP** Data specified on the DDS DOCIDXTAG() keyword is retrieved. Only tags specified at the "group" level are processed. These tags inherit the page number of the next page to occur in the spooled file and are propagated to subsequent pages in the page group. Propagation processing gives the appearance that the "group" level tag was specified directly on each subsequent page in the group.
- This value is only valid with \*AFPDS spooled files. Position and length are ignored as data does not appear on the printed page and the length is derived from the value stored.
- 1-255** Specify the line number where the data is located on the page.

## Element 2: Position

- 1-378** Specify the position where the data is located in the line. Valid values range from 1 through 378. The value specified plus the data length should be less than the number of print positions in the spooled file.

## Element 3: Length

- 1-255** Specify the length of the data. The value specified plus the start position should be less than the number of print positions in the spooled file.

---

## Page number (PAGE)

Specifies the page number from which data is retrieved. INT(4)

<u>1</u>	Data is retrieved from the first page of the spooled file.
<b>*LAST</b>	Data is retrieved from the last page of the spooled file.
<i>integer</i>	Specifies the page from which data is retrieved.

---

## Job name (JOB)

Specifies the job that contains the spooled file.

### Single values

*	The job that issued the command.
---	----------------------------------

### Qualifier 1: Job name

<i>name</i>	Specify the name of the job. CHAR(10)
-------------	---------------------------------------

### Qualifier 2: User

<i>name</i>	Specify the name that identifies the user profile under which the job is run. CHAR(10)
-------------	--

### Qualifier 3: Number

<i>00000-99999</i>	Specify the system assigned job number. CHAR(6)
--------------------	---

---

## Spool file number (SPLNBR)

Specifies the number of the spooled file. INT(4)

<b>*LAST</b>	The highest numbered spooled file with the specified file name is used.
<b>*ONLY</b>	Only one spooled file in the job has the specified file name; therefore, the number of the spooled file is not necessary.
<b>*ANY</b>	The spooled file number is not used to determine which spooled file is used. Use this value when the job system name parameter or the spooled file create date and time parameter is to take precedence over the spooled file number when selecting a spooled file.
<b>1-99999</b>	Specify the number of the spooled file.

---

## Examples

### Example 1:

```
RTVPAGDTA FILE(QSYSVRT)
           RTNDATA(&CUSTNO) PAGDTA(3 4 10)
           JOB(033194/QPGMR/MONTHEND) SPLNBR(2)
```

This command retrieve data from line 3, position 4 for a length of 10 from the first page in the spooled file and places the data in the variable &CUSTNO. The spooled file processed is file number 2, QSYSVRT, from job 033194/QPGMR/MONTHEND.

---

## Error messages

### \*ESCAPE messages

<b>SIX0049</b>	Unable to retrieve page data for file .
----------------	---

---

## Work with Gumbo Output Queue (WRKGSIOUQ)

**Where allowed to run:** All environments (\*ALL)  
**Threadsafe:** No

The Work with Gumbo Output Queue (WRKGSIOUQ) command works like IBM i's Work with Output Queue (WRKOUTQ) command but provides additional options to access the functions of Dicer.

---

### Parameters

Keyword	Description	Choices	Notes
OUTQ	Output queue	<i>Qualified object name</i>	Required,
	Qualifier 1: Output queue	<i>Name</i>	Positional 1
	Qualifier 2: Library	<i>Name, *LIBL, *CURLIB</i>	
OUTPUT	Output	<i>*, *PRINT</i>	Optional, Positional 2

---

### Output queue (OUTQ)

Specifies the Output queue and the library where it resides.

This is a required parameter.

#### Qualifier 1: Output queue

***name*** Specify the name of the output queue.

#### Qualifier 2: Library

**\*LIBL** All libraries in the thread's library list are searched.

**\*CURLIB** Use the current library for the job. If no library is specified as the current library for the job, QGPL is used.

***name*** Specify the name of the library.

---

### Output (OUTPUT)

Specifies where the output from the command is sent. CHAR(10)

**\_** The output is displayed (if requested by an interactive job) or printed with the job's spooled output (if requested by a batch job).

**\*PRINT** The output is printed with the job's spooled output.

---

### Examples

#### Example 1:

```
WRKGSIOUQ OUTQ(PRT01)
```

This command allows you to work with all of the spooled files on the PRT01 output queue.

#### Example 2:

```
WRKGSIOUQ OUTQ(QGPL/QPRINT)
```

This command allows you to work with all of the spooled files on the QPRINT output queue in library QGPL.

---

### Error messages

#### \*ESCAPE messages

**SUI3002** Command processing failure.

---

## Work with Gumbo Spooled Files (WRKGSISPLF)

Where allowed to run: All environments (\*ALL)  
Threadsafe: No

The Work with Gumbo Spooled Files (WRKGSISPLF) command works like IBM i's Work with Spooled Files (WRKSPLF) command but provides additional options to access the functions of Dicer.

---

### Parameters

Keyword	Description	Choices	Notes
SELECT	Select files for	<i>Element list</i>	Optional, Positional 1
	Element 1: User	<i>Name, *CURRENT, *ALL</i>	
	Element 2: Print device	<i>Name, *ALL, *OUTQ</i>	
	Element 3: Form type	<i>Character value, *ALL, *STD</i>	
	Element 4: User data	<i>Character value, *ALL</i>	
OUTPUT	Output	<i>*, *PRINT</i>	Optional, Positional 2

---

### Select files for (SELECT)

Specifies the criteria used to further select spooled files for display. Selection criteria consist of 4 elements. Only spooled files that match each of the values are selected.

#### Element 1: User

- \*CURRENT** Spooled files created by the user of the current job are selected.
- \*ALL** All spooled files are selected regardless of the user creating them.
- name** Specify a user name. Only spooled files created by the user are selected.

#### Element 2: Print device

- \*ALL** All spooled files are selected regardless of the device or output queue.
- \*OUTQ** All files on any user-created output queue are selected. A user-created output queue is any output queue that is not automatically created by a device. A user-created output queue does not generally have the same name as a device, but if it does, it does not reside in library QUSRSYS.
- name** Specify a device name. Only files on the device created output queue for that device are selected. A device created output queue is one that has the same name as a device and resides in the QUSRSYS library. Unless it already exists, it will automatically be created by the system when the device is created. A device created output queue cannot be deleted.

#### Element 3: Form type

- \*ALL** All spooled files are selected regardless of their form type.
- \*STD** Only files that specify the standard form type are selected.
- character-value** Specify the form type to select the file.

#### Element 4: User data

- \*ALL** All spooled files are selected regardless of their user data.
- character-value** Specify the user data to select the file.

---

### Output (OUTPUT)

Specifies where the output from the command is sent. CHAR(10)

- \*** The output is displayed (if requested by an interactive job) or printed with the job's spooled output (if requested by a batch job).
- \*PRINT** The output is printed with the job's spooled output.

---

## Examples

### Example 1:

```
WRKGSISPLF  SELECT(*ALL *ALL *ALL *ALL)
```

This command allows you to work with all of the spooled files on the system.

### Example 2:

```
WRKGSISPLF  SELECT(CASMITH *ALL *ALL MEMO)
```

This command allows you to work with all of the spooled files on the system for the user named CASMITH that have MEMO specified in the user data for the spooled file.

---

## Error messages

### \*ESCAPE messages

**SUI3002**            Command processing failure.

---

## Chapter 7 Trouble-Shooting

---

### What's In This Chapter

This chapter provides information and procedures useful for correcting or reporting Dicer problems. The chapter:

- Describes general trouble-shooting.
- Describes software installation problems.
- Describes merge problems.
- Describes how to create a spool save file.
- Describes how to email a spool save file.

---

### General Trouble-Shooting

If a command from Dicer fails to run to completion or if the results you receive are different from those expected, perform these items:

- Check the detailed messages in your job log:
  1. Run the DSPJOBLOG command.
  2. Press F10 to display detailed messages.
  3. Locate the messages related to the error.
  4. Place your cursor on each message in turn and press F1.
  5. Take any corrective actions suggested by the messages.
- Download the current cumulative PTF package from [www.gumbo.com](http://www.gumbo.com).
- Check the bottom of the PTF page at [www.gumbo.com](http://www.gumbo.com) for IBM PTFs that may be required.
- Review the detailed trouble shooting procedures in this chapter for solutions related to your problem.

If you are unable to correct the problem, prepare a problem report and contact your service provider.

---

### Software Installation Problems

This section describes problems, causes, and solutions specific to software installation.

- Installation Generates "Directory not registered. (C G)"

<b>Symptom</b>	During installation inquiry message id CPA3DE4 "Directory not registered. (C G)" is issued.
<b>Cause</b>	IBM i has lost the relationship between the product and the directory and hence the message.
<b>Solution</b>	You can safely take a "G" to this message. You will receive the message three or four times.

- Installation Fails

<b>Symptom</b>	Installation fails and diagnostic message id CPF9898 "Unable to clear old release. Is the software being used?" appears in the job log. Or, when the installation verification option is run, verification fails with diagnostic message id CPD0C2E appearing in the job log.
<b>Cause</b>	This usually arises from attempting to install a new release over an old release while objects in the old release are in use.
<b>Solution</b>	End the jobs that are holding locks on (using) objects from the old release and perform the installation again.

- Installation Fails or Installation Verification Fails

<b>Symptom</b>	Installation or installation verification fails and messages in the job log do not help in recovering.
<b>Cause</b>	The software is not installed correctly or the installation is damaged. This can be caused for a variety of reasons including renaming of libraries, directories, or objects that make up the product.
<b>Solution</b>	<p>Get the system to a stable consistent state by completely removing the product then re-installing it by performing the following:</p> <ol style="list-style-type: none"> <li>1. Check the system library list by running:  <code>DSPSYSVAL SYSVAL(QSYSLIBL)</code>  <b>Note:</b> If DICER is present, remove it with WRKSYSVAL and IPL the system.</li> <li>2. Delete the licensed program by running:  <code>DLTLICPGM LICPGM(2A55DCR) RLS(*ALL) OPTION(*ALL)</code>  <b>Note:</b> It is okay if this fails with diagnostic CPD3D91 "Product 2A55DCR option *ALL release *ALL not installed."</li> <li>3. Delete the product's library by running:  <code>DLTLIB LIB(DICER)</code>  <b>Note:</b> It is okay if this fails with escape CPF2110 "Library DICER not found."</li> <li>4. Delete the product's directories by running:  <code>RMVDIR DIR( '/Gumbo/ProdData/2A55DCR' ) SUBTREE(*ALL) RMVLNK(*YES)</code>  <b>Note:</b> It is okay if this fails with escape CPFA0A9 "Object not found. ...".            If there are no other <b>GUMBO</b> products installed:  <code>RMVDIR DIR( '/Gumbo/ProdData' )</code>  <code>RMVDIR DIR( '/Gumbo' )</code>  <b>Note:</b> It is okay if these fail with escape CPFA0A9 "Object not found. ...".</li> <li>5. Rebuild IBM i's internal licensed program information by running:  <code>CALL PGM(QSYS/QSZRECOV)</code>  <b>Note:</b> This takes several minutes depending on machine size.</li> <li>6. Install the product according to the instructions in the Installation chapter.</li> <li>7. Enter your authorization code.</li> </ol>

---

## Merge Problems

This section describes problems, causes, and solutions specific to merge processing.

- Pages are in an unexpected order

<b>Symptom</b>	The Merge Spooled File (MRGSPLF) command completes without error however the pages in the resulting spooled file are in an unexpected order.
<b>Cause</b>	The Page sort key value does not select the intended data.
<b>Solution</b>	Use the Dump Page Index Positions (DMPPIP) command to print a dump that shows the line and position values of data in the spooled file. Use the generated listing to correct the Page sort key values specified on the Merge Spooled File (MRGSPLF) command.

---

## Creating a Spool Save File

A save file containing all the information needed to transport and reproduce a spooled file on a **GUMBO** development system can be produced using the Create Spool Save File (CRTSPLSAVF) command. To create a spool save file:

- Determine the identity of the spooled file to be saved. A spooled file's identity consists of the file's name, the name/user/number of the job that created it, and the spooled file's number within the job. You can find this information using option 8 from the Work with Spooled Files (WRKSPLF) or Work with Output Queue (WRKOUTQ) commands among others.
- Determine a library to contain the save file. Typically this is your test library. If you do not have a test library, QGPL can be used.
- Determine a name for the save file. It must be a file name that does not exist in the library determined above.
- Run the Create Spool Save File (CRTSPLSAVF) command entering the information from the preceding steps.

**Note:** The command allows for a short message to be included in the save file. Use this to describe the reason for the save file and to include contact information such as your name and phone number.

In saving the spooled file the command creates a temporary library. It retrieves the contents and attributes of the spooled file and stores these in a user space. Any resources used (such as page segments or overlays) are duplicated to the temporary library. Data areas containing various system values and the message are placed in the library. After creating the requested save file, the library is saved to it and finally the temporary library is deleted.

---

## Emailing A Spool Save File

Once a spool save file has been created using the Create Spool Save File (CRTSPLSAVF) command you can download it to your PC and email it to **GUMBO** by following these steps:

1.  Insure the FTP server is active by running:

```
STRTCPSVR SERVER (*FTP)
```

2.  Choose Start > Programs > Accessories > Command Prompt to open a command prompt.
3.  Create a temporary directory and change to it:

```
md c:\gumbo [Enter]
cd c:\gumbo [Enter]
```

4.  Open an FTP connection to IBM i by substituting your system's host name and running:

```
ftp host_name [Enter]
```

5.  Enter a user name and password as prompted.
6.  Change to binary (image) mode by running:

```
binary [Enter]
```

7.  Change to library/file/member mode by running:

```
cd /qsys.lib/qgpl.lib [Enter]
quote site namefmt 0 [Enter]
```

8. [\[PC\]](#) Download the spool save file by running (in this example the save file's name is QGPL/TEST):

```
get qgpl/test \[Enter\]
```

9. [\[PC\]](#) End the ftp session and the command prompt by running:

```
quit \[Enter\]  
exit \[Enter\]
```

10. [\[PC\]](#) Send email to support@gumbo.com after attaching file c:\gumbo\test.

Include in your email a description of the problem encountered and the command parameter values you were using when it happened.

---

## Appendix A Record Descriptions

---

### What's In This Appendix

This appendix provides information on Dicer files and structures. The appendix:

- Describes the display page data record.

---

### Display Page Data Record

The display page data record PDPAGDRF is in model file DCPAGDD which is used by the Display Page Data (DSPAGDTA) command to generate output files.

PDPAGDRF is made up of several groups of fields that describe an element of the page.

- Spooled file. These fields provide information about the spooled file from which the data was taken.

<b>PDJSYS</b>	Name of the system where the job that created the spooled file ran.
<b>PDJJOB</b>	Name of the job that created the spooled file.
<b>PDJUSR</b>	Name of the user who produced the spooled file.
<b>PDJNBR</b>	Number of the job in the system.
<b>PDJSPF</b>	Name of the spooled file.
<b>PDJSP#</b>	Spooled file number within the job.

- Location. These fields describe the location of the data in the spooled file.

<b>PDPAGE</b>	Page number.
<b>PDLINE</b>	Line number the data appears on.
<b>-53 = *DOCIDXTAG</b>	The data was added to the spooled file using the DDS DOCIDXTAG() keyword at either the page level or group level.
<b>-54 = *DOCIDXPAG</b>	The data was added to the spooled file using the DDS DOCIDXTAG() keyword at the page level.
<b>-55 = *DOCIDXGRP</b>	The data was added to the spooled file using the DDS DOCIDXTAG() keyword at the group level.
<b>-56 = *STRPAGGRP</b>	The data was added to the spooled file using the DDS STRPAGGRP() keyword.
<b>-57 = *DOCIDXTAGP</b>	The data was added to the spooled file using the DDS DOCIDXTAG() keyword at the page level, group level or was propagated from the group level to all pages in the group.
<b>-58 = *DOCIDXGRPP</b>	The data was added to the spooled file using the DDS DOCIDXTAG() keyword at the group level or was propagated from the group level to all pages in the group.
<b>-59 = *STRPAGGRPP</b>	The data was added to the spooled file using the DDS STRPAGGRP() keyword or was propagated from the keyword to all pages in the page group.
<b>PDPOS</b>	Position on the line the data starts. When PDLINE contains one of the special values, PDPOS is zero.

- Data. These fields contain the data.

<b>PDVLEN</b>	Length of data contained in the following field.
<b>PDVDTA</b>	Data retrieved from the page. When PDLINE is one of the special values related to the DDS STRPAGGRP() keyword, PDVDTA contains the "group-name" specified. When PDLINE is one of the special values related to the DDS DOCIDXTAG() keyword, PDVDTA contains the "attribute-value" specified.

**PDNLEN**  
**PDNDTA**

Length of data contained in the following field.

Name data. When PDLINE is one of the special values related to the DDS DOCIDXTAG() keyword, PDNDTA contains the "attribute-name" specified otherwise it is blank.

---

## **Appendix D License Agreement**

### **License**

Gumbo Software, Inc. grants to the purchaser, permanent license to use Dicer on the specified serial number and processor group IBM system. For system wide licenses the grant is specific to the system as a whole. For partition licenses the grant is specific to a partition number (ID) and maximum processing capacity. This license is not transferable and not exclusive.

### **Warranty**

Gumbo Software, Inc. makes no warranty, either expressed or implied, with respect to Dicer, its merchantability or its fitness for any particular purpose. Dicer software and documentation are provided on an "AS IS" basis.

### **Liability**

Gumbo Software, Inc. assumes no responsibility for the use of Dicer. Purchaser agrees that Gumbo Software, Inc.'s liability under any circumstances shall not exceed the charges paid by purchaser.

### **Updates**

Gumbo Software, Inc. may from time to time update Dicer to correct defects or add enhancements. Purchaser will receive updates for a period of one year from date of purchase.
